

Migrating From Harmony Connect to Harmony SASE

What Is Happening?

Check Point Harmony SASE is a new offering that incorporates Perimeter 81 into the Check Point Infinity Architecture.

Harmony SASE is set to transform the way you secure remote access in the age of hybrid work and cloud migration. Harmony SASE delivers a unique suite of capabilities that include blazing-fast secure internet browsing, Zero Trust Access with full mesh connectivity, and integration with Check Point's SD-WAN—all with an emphasis on ease-of-use and streamlined management.

As part of this effort, Harmony Connect reached its end of sale in November 2023 and support will continue until December 2025.

We are currently offering free migration for Harmony Connect and Harmony Total customers.
